ARG10023 anti-M-CSF antibody [116]

Package: 100 μg Store at: -20°C

Summary

Product Description Mouse Monoclonal antibody [116] recognizes M-CSF

Tested Reactivity Hu
Tested Application ELISA

Specificity Does not cross react with BSA or other human cytokines tested such as IL-1β, IL-8, IL-16, EGF, G-CSFR,

GM-CSF, MCP-1, MCP-3, TGF- β and TNF- α .

Host Mouse

Clonality Monoclonal

Clone 116

Isotype IgG2b, kappa

Target Name M-CSF
Species Human

Immunogen Purified recombinant human M-CSF (rhM-CSF)

Conjugation Un-conjugated

Alternate Names Macrophage colony-stimulating factor 1; CSF-1; Lanimostim; M-CSF; MCSF

Application Instructions

Application Note

* The dilutions indicate recommended starting dilutions and the optimal dilutions or concentrations should be determined by the scientist.

Properties

Form Liquid

Purification Protein G affinity purified

Buffer 0.01M PBS (pH 7.2)

Concentration 1 mg/ml

Storage instruction For continuous use, store undiluted antibody at 2-8°C for up to a week. For long-term storage, aliquot

and store at -20°C or below. Storage in frost free freezers is not recommended. Avoid repeated

freeze/thaw cycles. Suggest spin the vial prior to opening. The antibody solution should be gently mixed

before use.

Note For laboratory research only, not for drug, diagnostic or other use.

Bioinformation

Database links GeneID: 1435 Human

Swiss-port # P09603 Human

Gene Symbol CSF1

Gene Full Name colony stimulating factor 1 (macrophage)

Background The protein encoded by this gene is a cytokine that controls the production, differentiation, and

function of macrophages. The active form of the protein is found extracellularly as a disulfide-linked homodimer, and is thought to be produced by proteolytic cleavage of membrane-bound precursors. The encoded protein may be involved in development of the placenta. Alternate splicing results in

multiple transcript variants. [provided by RefSeq, Sep 2011]

Function Cytokine that plays an essential role in the regulation of survival, proliferation and differentiation of

hematopoietic precursor cells, especially mononuclear phagocytes, such as macrophages and monocytes. Promotes the release of proinflammatory chemokines, and thereby plays an important role in innate immunity and in inflammatory processes. Plays an important role in the regulation of osteoclast proliferation and differentiation, the regulation of bone resorption, and is required for

normal bone development. Required for normal male and female fertility. Promotes reorganization of the actin cytoskeleton, regulates formation of membrane ruffles, cell adhesion and cell migration. Plays

a role in lipoprotein clearance. [UniProt]

Research Area Cell Biology and Cellular Response antibody; Immune System antibody

Calculated Mw 60 kDa

PTM N- and O-glycosylated. Glycosylation and proteolytic cleavage yield different soluble forms. One high

molecular weight soluble form is a proteoglycan containing chondroitin sulfate. O-glycosylated with core 1 or possibly core 8 glycans. Isoform 1 is N- and O-glycosylated. Isoform 3 is only N-glycosylated.
