ARG23536 anti-CD80 antibody [IL-A159]

Package: 50 μg Store at: -20°C

Summary

Product Description Mouse Monoclonal antibody [IL-A159] recognizes CD80.

Mouse anti Bovine CD80 antibody, clone IL-A159 recognizes the bovine CD80 cell surface antigen, expressed by dendritic cells, activated macrophages and activated B cells. CD80 plays a key role in co-

stimulation of T cells during the primary immune response.

Tested Reactivity Bov, Sheep

Tested Application FACS

Host Mouse

Clonality Monoclonal

Clone IL-A159

Isotype IgG1

Target Name CD80

Species Bovine

Conjugation Un-conjugated

Alternate Names B7.1; CTLA-4 counter-receptor B7.1; CD28LG; T-lymphocyte activation antigen CD80; B7-1; CD28LG1;

B7; LAB7; Activation B7-1 antigen; CD antigen CD80; BB1

Application Instructions

Application table	Application	Dilution
	FACS	Neat
Application Note	FACS: Use 10 µl of the suggested working dilution to label 10^6 cells in 100 µl. * The dilutions indicate recommended starting dilutions and the optimal dilutions or concentrations	

The allutions indicate recommended starting dilutions and the optimal dilutions or concentrations

should be determined by the scientist.

Properties

Form Liquid

Purification Purification with Protein A.

Buffer PBS and 0.09% Sodium azide.

Preservative 0.09% Sodium azide

Concentration 1 mg/ml

Storage instruction For continuous use, store undiluted antibody at 2-8°C for up to a week. For long-term storage, aliquot

and store at -20°C or below. Storage in frost free freezers is not recommended. Avoid repeated

freeze/thaw cycles. Suggest spin the vial prior to opening. The antibody solution should be gently mixed

before use.

Note For laboratory research only, not for drug, diagnostic or other use.

Bioinformation

Gene Symbol CD80

Gene Full Name CD80 molecule

Background The protein encoded by this gene is a membrane receptor that is activated by the binding of CD28 or

CTLA-4. The activated protein induces T-cell proliferation and cytokine production. This protein can act as a receptor for adenovirus subgroup B and may play a role in lupus neuropathy. [provided by RefSeq,

Aug 2011]

Function Involved in the costimulatory signal essential for T-lymphocyte activation. T-cell proliferation and

cytokine production is induced by the binding of CD28, binding to CTLA-4 has opposite effects and

inhibits T-cell activation. [UniProt]

Calculated Mw 33 kDa
