Bioinformation

Gene Symbol	DUX4L1
Gene Full Name	double homeobox 4 like 1
Background	DUX4, or double homeobox4, is a human protein that is a transcriptional activator of paired-like homeodomain transcription factor 1. Clinically it is a facioscapulohumeral muscular dystrophy candidate gene that appears to have a toxic gain of function. In FSHD individuals, the expression of the full-length DUX4 transcript is not completely suppressed in skeletal muscle and possibly other differentiated tissues.
