

## ARG30304 Astrocyte Maturation / Muller Cell Marker Antibody Duo (GFAP, Vimentin)

Package: 1 pair  
Store at: -20°C

### Component

Cat. No.	Component Name	Host clonality	Reactivity	Application	Package
ARG10122	anti-GFAP antibody [GF5]	Mouse mAb	Hu, Ms, Rat	ELISA, ICC/IF, IHC-Fr, WB	50 µg
ARG66302	anti-Vimentin antibody [SQab1859]	Mouse mAb	Hu, Ms, Rat, Chk, Dog, Goat, Hm, Mk, Pig, Xenopus, Zfsh	FACS, ICC/IF, IHC-Fr, IHC-P, WB	50 µg

### Summary

#### Product Description

Glial fibrillary acidic protein (GFAP) is the major intermediate filament protein in mature astrocytes, a main type of glial cells in the central nervous system (CNS). GFAP is a fairly astrocyte marker.

Vimentin is a type III intermediate filament protein present in many cell types of mesodermal origin as well as some ectodermal cells, including neural stem cells. Vimentin is expressed in transient cell type radial glia during development. After maturation, most radial glia disappear and transform into stellate astrocytes, although radial glial cells remain in the retina (Müller cells).

arigo's ARG30088 Astrocyte Maturation / Muller Cell Marker Antibody Duo (GFAP, Vimentin) comprises Vimentin and GFAP antibodies for identifying immature and mature astrocytes respectively. It is also excellent for labeling Müller cells in the retina.

#### Target Name

Astrocyte Maturation / Muller Cell Marker

#### Alternate Names

Astrocyte Maturation / Muller Cell Marker antibody; GFAP antibody; Vimentin antibody

### Properties

#### Storage instruction

For continuous use, store undiluted antibody at 2-8°C for up to a week. For long-term storage, aliquot and store at -20°C or below. Storage in frost free freezers is not recommended. Avoid repeated freeze/thaw cycles. Suggest spin the vial prior to opening. The antibody solution should be gently mixed before use.

#### Note

For laboratory research only, not for drug, diagnostic or other use.
