#### Bioinformation

Gene Symbol CD82

Gene Full Name CD82 molecule

Background This metastasis suppressor gene product is a membrane glycoprotein that is a member of the

transmembrane 4 superfamily. Expression of this gene has been shown to be downregulated in tumor progression of human cancers and can be activated by p53 through a consensus binding sequence in the promoter. Its expression and that of p53 are strongly correlated, and the loss of expression of these two proteins is associated with poor survival for prostate cancer patients. Two alternatively spliced transcript variants encoding distinct isoforms have been found for this gene. [provided by RefSeq, Jul

2008]

Function Associates with CD4 or CD8 and delivers costimulatory signals for the TCR/CD3 pathway. [UniProt]

Calculated Mw 30 kDa

Cellular Localization Membrane; Multi-pass membrane protein. [UniProt]
