ARG54201 anti-CD32 antibody [3D3] (PE)

Package: 50 tests Store at: 4°C

Summary

Product Description PE-conjugated Mouse Monoclonal antibody [3D3] recognizes CD32

Tested Reactivity Hu
Tested Application FACS

Specificity The mouse monoclonal antibody 3D3 recognizes CD32, a 40 kDa polymorphic transmembrane

glycoprotein serving as the low affinity receptor for aggregated IgG. This antibody recognizes CD32 on B cells of all donors, but on platelets, monocytes, and granulocytes of only some donors (131R variant,

but not 131H variant).

Host Mouse

Clonality Monoclonal

Clone 3D3 Isotype IgG1

Target Name CD32

Species Human

Immunogen purified glycosylated recombinant human FcgammaRIIa2

Conjugation PE

Alternate Names Fc-gamma RII-a; CD antigen CD32; FcGR; IgG Fc receptor II-a; FCGR2A1; CD32A; FCGR2; Low affinity

immunoglobulin gamma Fc region receptor II-a; FcRII-a; Fc-gamma-RIIa; FCG2; IGFR2; CD32; CDw32

Application Instructions

Application table	Application	Dilution
	FACS	10 μl / 10^6 cells
Application Note	* The dilutions indicate recommended starting dilutions and the optimal dilutions or concentrations should be determined by the scientist.	

Properties

Form Liquid

Purification Note The purified antibody is conjugated with R-Phycoerythrin (PE) under optimum conditions. The

conjugate is purified by size-exclusion chromatography and adjusted for direct use. No reconstitution is

necessary.

Buffer PBS, 15 mM Sodium azide and 0.2% (w/v) high-grade protease free BSA

Preservative 15 mM Sodium azide

Stabilizer 0.2% (w/v) high-grade protease free BSA

Storage instruction Aliquot and store in the dark at 2-8°C. Keep protected from prolonged exposure to light. Avoid

repeated freeze/thaw cycles. Suggest spin the vial prior to opening. The antibody solution should be

For laboratory research only, not for drug, diagnostic or other use.

Bioinformation

Database links <u>GeneID: 2212 Human</u>

Swiss-port # P12318 Human

Gene Symbol FCGR2A

Gene Full Name Fc fragment of IgG, low affinity IIa, receptor (CD32)

Background CD32 (FcgammaRII) is a low affinity receptor for aggregated IgG. It is strongly expressed on monocytes,

granulocytes, myeloid and myeloblastic cell lines, and weakly on B cells, CD34+ bone marrow cells, and resting and activated platelets. After binding its ligand, CD32 induces IgG-mediated phagocytosis and oxidative burst in monocytes and neutrophils, whereas in B cells it mediates a negative signal. This polymorphic transmembrane glycoprotein is expressed not only in the activating (CD32a) and inhibitory isoform (CD32b), but also in individual variants with differing avidities for IgG subtypes (e.g. the

CD32a131R and CD32a131H allotypes).

Function Binds to the Fc region of immunoglobulins gamma. Low affinity receptor. By binding to IgG it initiates

cellular responses against pathogens and soluble antigens. Promotes phagocytosis of opsonized

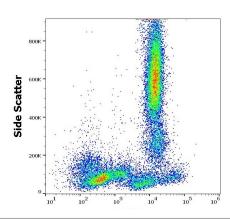

antigens. [UniProt]

Research Area Developmental Biology antibody; Immune System antibody

Calculated Mw 35 kDa

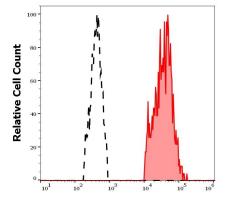

PTM Phosphorylated by SRC-type Tyr-kinases such as LYN, BLK, FYN, HCK and SYK.
