Bioinformation

Database links	GeneID: 342510 Human Swiss-port # Q496F6 Human
Gene Symbol	CD300E
Gene Full Name	CD300e molecule
Background	CD300e / IREM-2 (immune receptor expressed by myeloid cells 2), also known as CLM2 or LMIR6, is a monomeric transmembrane glycoprotein with a single extracellular immunoglobulin-like domain. Intracellularly it associates with DAP-12, an ITAM-containing adaptor molecule. CD300e is expressed on mature monocytes and peripheral blood myeloid dendritic cells. Its crosslinking leads to release of pro-inflammatory cytokines, and increased expression of activation markers.
Function	Probably acts as an activating receptor. [UniProt]
Research Area	Immune System antibody
Calculated Mw	23 kDa
PTM	N-glycosylated.
