ARG55670 anti-NM23A antibody

Package: 100 μl Store at: -20°C

Summary

Product Description Mouse Monoclonal antibody recognizes NM23A

Tested Reactivity Hu, Rat

Tested Application IHC-P, WB

Host Mouse

Clonality Monoclonal
Clone 1172CT2.4.1.1

Isotype IgG2a
Target Name NM23A
Species Human

Immunogen Purified His-tagged Human NM23A

Conjugation Un-conjugated

Alternate Names NDP kinase A; NDPK-A; NM23; Nucleoside diphosphate kinase A; Granzyme A-activated DNase; NDKA;

NBS; NM23-H1; NB; NDPKA; NDK A; Tumor metastatic process-associated protein; EC 2.7.4.6; GAAD;

AWD; Metastasis inhibition factor nm23

Application Instructions

Application table	Application	Dilution
	IHC-P	1:25
	WB	1:1000
Application Note	* The dilutions indicate recommended starting dilutions and the optimal dilutions or concentrations should be determined by the scientist.	
Positive Control	Jurkat	

Properties

Form Liquid

Purification Purification with Protein G.

Buffer PBS and 0.09% (W/V) Sodium azide.

Preservative 0.09% (W/V) Sodium azide.

Storage instruction For continuous use, store undiluted antibody at 2-8°C for up to a week. For long-term storage, aliquot

and store at -20°C or below. Storage in frost free freezers is not recommended. Avoid repeated freeze/thaw cycles. Suggest spin the vial prior to opening. The antibody solution should be gently mixed

before use.

Note For laboratory research only, not for drug, diagnostic or other use.

Bioinformation

GeneID: 4830 Human

Swiss-port # P15531 Human

Swiss-port # Q05982 Rat

Gene Symbol NME1

Gene Full Name NME/NM23 nucleoside diphosphate kinase 1

Background This gene (NME1) was identified because of its reduced mRNA transcript levels in highly metastatic

cells. Nucleoside diphosphate kinase (NDK) exists as a hexamer composed of 'A' (encoded by this gene) and 'B' (encoded by NME2) isoforms. Mutations in this gene have been identified in aggressive

neuroblastomas. Two transcript variants encoding different isoforms have been found for this gene. Cotranscription of this gene and the neighboring downstream gene (NME2) generates naturally-occurring transcripts (NME1-NME2), which encodes a fusion protein comprised of sequence sharing identity with

each individual gene product. [provided by RefSeq, Jul 2008]

Function Major role in the synthesis of nucleoside triphosphates other than ATP. The ATP gamma phosphate is

transferred to the NDP beta phosphate via a ping-pong mechanism, using a phosphorylated active-site intermediate. Possesses nucleoside-diphosphate kinase, serine/threonine-specific protein kinase, geranyl and farnesyl pyrophosphate kinase, histidine protein kinase and 3'-5' exonuclease activities. Involved in cell proliferation, differentiation and development, signal transduction, G protein-coupled receptor endocytosis, and gene expression. Required for neural development including neural patterning and cell fate determination. During GZMA-mediated cell death, works in concert with TREX1.

NME1 nicks one strand of DNA and TREX1 removes bases from the free 3' end to enhance DNA damage

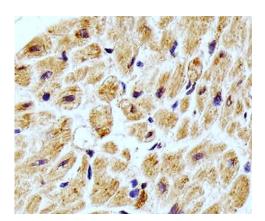

and prevent DNA end reannealing and rapid repair. [UniProt]

Calculated Mw 17 kDa

Cellular Localization Cytoplasm. Nucleus. Note=Cell-cycle dependent nuclear localization which can be induced by

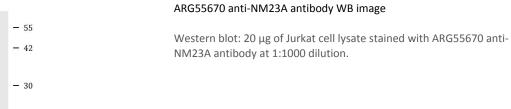

interaction with Epstein-barr viral proteins or by degradation of the SET complex by GzmA
