ARG55894 anti-Fibronectin antibody [TV-1]

Package: 50 μg Store at: -20°C

Summary

Product Description Mouse Monoclonal antibody [TV-1] recognizes Fibronectin

Tested Reactivity Hu

Tested Application FACS, ICC/IF, IHC-P

Specificity This antibody reacts with the cellular as well as plasma form of fibronectin.

Host Mouse

Clonality Monoclonal

Clone TV-1

Isotype IgG1, kappa
Target Name Fibronectin
Species Human

Immunogen A T-cell lymphoma biopsy

Conjugation Un-conjugated

Alternate Names ED-B; CIG; GFND; Cold-insoluble globulin; FNZ; LETS; GFND2; Fibronectin; MSF; FINC; FN

Application Instructions

Application table	Application	Dilution
	FACS	1 - 2 μg/10^6 cells
	ICC/IF	1 - 2 μg/ml
	IHC-P	1 - 2 μg/ml
Application Note	IHC-P: Antigen Retrieval: 10 mM Citrate buffer (pH 6.0) for 10-20 min, followed by cooling at RT for 20 min. * The dilutions indicate recommended starting dilutions and the optimal dilutions or concentrations should be determined by the scientist.	

Properties

Form Liquid

Purification Purification with Protein G.

Buffer PBS (pH 7.4), 0.05% Sodium azide and 0.1 mg/ml BSA

Preservative 0.05% Sodium azide

Stabilizer 0.1 mg/ml BSA

Concentration 0.2 mg/ml

Storage instruction For continuous use, store undiluted antibody at 2-8°C for up to a week. For long-term storage, aliquot

and store at -20°C or below. Storage in frost free freezers is not recommended. Avoid repeated freeze/thaw cycles. Suggest spin the vial prior to opening. The antibody solution should be gently mixed

before use.

Note For laboratory research only, not for drug, diagnostic or other use.

Bioinformation

Database links <u>GeneID: 2335 Human</u>

Swiss-port # P02751 Human

Gene Symbol FN1

Gene Full Name fibronectin 1

Background This gene encodes fibronectin, a glycoprotein present in a soluble dimeric form in plasma, and in a

dimeric or multimeric form at the cell surface and in extracellular matrix. Fibronectin is involved in cell adhesion and migration processes including embryogenesis, wound healing, blood coagulation, host defense, and metastasis. The gene has three regions subject to alternative splicing, with the potential to produce 20 different transcript variants. However, the full-length nature of some variants has not

been determined. [provided by RefSeq, Jul 2008]

Function Fibronectins bind cell surfaces and various compounds including collagen, fibrin, heparin, DNA, and

actin. Fibronectins are involved in cell adhesion, cell motility, opsonization, wound healing, and maintenance of cell shape. Involved in osteoblast compaction through the fibronectin fibrillogenesis cell-mediated matrix assembly process, essential for osteoblast mineralization. Participates in the

regulation of type I collagen deposition by osteoblasts.

Anastellin binds fibronectin and induces fibril formation. This fibronectin polymer, named

superfibronectin, exhibits enhanced adhesive properties. Both anastellin and superfibronectin inhibit

tumor growth, angiogenesis and metastasis. Anastellin activates p38 MAPK and inhibits lysophospholipid signaling. [UniProt]

Tysophiosphonpia signamig. [On

Calculated Mw 272 kDa

PTM

It is not known whether both or only one of Thr-2064 and Thr-2065 are/is glycosylated.

Forms covalent cross-links mediated by a transglutaminase, such as F13A or TGM2, between a glutamine and the epsilon-amino group of a lysine residue, forming homopolymers and heteropolymers

(e.g. fibrinogen-fibronectin, collagen-fibronectin heteropolymers).

Phosphorylated by FAM20C in the extracellular medium.

Proteolytic processing produces the C-terminal NC1 peptide, anastellin.

Some lysine residues are oxidized to allysine by LOXL3, promoting fibronectin activation and matrix

formation.

Sulfated.
