Bioinformation

Gene Symbol	CS
Gene Full Name	citrate synthase
Background	The protein encoded by this gene is a Krebs tricarboxylic acid cycle enzyme that catalyzes the synthesis of citrate from oxaloacetate and acetyl coenzyme A. The enzyme is found in nearly all cells capable of oxidative metabolism. This protein is nuclear encoded and transported into the mitochondrial matrix, where the mature form is found. [provided by RefSeq, Jul 2008]
Calculated Mw	52 kDa
Cellular Localization	Mitochondrion matrix. [UniProt]
