ARG58624 anti-FGF4 antibody (Biotin)

Package: 50 μg Store at: -20°C

Summary

Product Description Biotin-conjugated Rabbit Polyclonal antibody recognizes FGF4

Tested Reactivity Hu

Tested Application ELISA, WB

Host Rabbit

Clonality Polyclonal

Isotype IgG

Target Name FGF4

Species Human

Immunogen E. coli derived Recombinant Human FGF4.

Conjugation Biotin

Alternate Names K-FGF; HST-1; FGF-4; Transforming protein KS3; HSTF-1; Heparin secretory-transforming protein 1;

Fibroblast growth factor 4; KFGF; HST; Heparin-binding growth factor 4; HBGF-4; HSTF1

Application Instructions

| Application table | Application | Dilution |
|-------------------|--|---|
| | ELISA | Sandwich: 0.25 - $1.0~\mu g/ml$ with ARG58623 as the capture antibody at 0.5 - $2.0~\mu g/ml$. |
| | WB | 0.1 - 0.2 μg/ml |
| Application Note | * The dilutions indicate recommended starting dilutions and the optimal dilutions or concentrations should be determined by the scientist. | |

Properties

Concentration

Form Liquid

Purification Affinity purified.

Buffer PBS (pH 7.2)

Storage instruction For continuous use, store undiluted antibody at 2-8°C for up to a week. For long-term storage, aliquot

and store at -20°C or below. Storage in frost free freezers is not recommended. Avoid repeated freeze/thaw cycles. Suggest spin the vial prior to opening. The antibody solution should be gently mixed

before use.

1 mg/ml

Note For laboratory research only, not for drug, diagnostic or other use.

Bioinformation

Gene Symbol FGF4

Gene Full Name fibroblast growth factor 4

Background The protein encoded by this gene is a member of the fibroblast growth factor (FGF) family. FGF family

members possess broad mitogenic and cell survival activities and are involved in a variety of biological processes including embryonic development, cell growth, morphogenesis, tissue repair, tumor growth and invasion. This gene was identified by its oncogenic transforming activity. This gene and FGF3, another oncogenic growth factor, are located closely on chromosome 11. Co-amplification of both genes was found in various kinds of human tumors. Studies on the mouse homolog suggested a function in bone morphogenesis and limb development through the sonic hedgehog (SHH) signaling

pathway. [provided by RefSeg, Jul 2008]

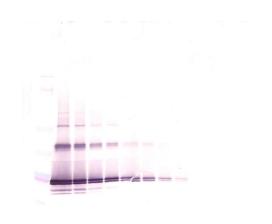

Function Plays an important role in the regulation of embryonic development, cell proliferation, and cell

differentiation. Required for normal limb and cardiac valve development during embryogenesis.

[UniProt]

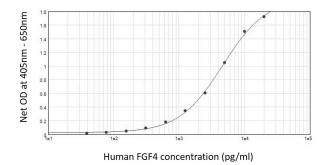

Calculated Mw 22 kDa

Images

ARG58624 anti-FGF4 antibody (Biotin) WB image

Western blot: 250 - 0.24 ng (left to right) of Recombinant Human FGF4 protein stained with ARG58624 anti-FGF4 antibody (Biotin), under non-reducing conditions.

ARG58624 anti-FGF4 antibody (Biotin) ELISA image

sandwich ELISA: ARG58623 anti-FGF4 antibody (100 μ l/well, 0.5 - 2.0 μ g/ml) in conjunction with ARG58624 anti-FGF4 antibody (Biotin) as a detection antibody (100 μ l/well, 0.25 - 1.0 μ g/ml), allows the detection of at least 0.2 - 0.4 μ g/well of recombinant Human FGF4.
