Bioinformation

Gene Symbol	GJA5
Gene Full Name	gap junction protein, alpha 5, 40kDa
Background	This gene is a member of the connexin gene family. The encoded protein is a component of gap junctions, which are composed of arrays of intercellular channels that provide a route for the diffusion of low molecular weight materials from cell to cell. Mutations in this gene may be associated with atrial fibrillation. Alternatively spliced transcript variants encoding the same isoform have been described. [provided by RefSeq, Jul 2008]
Function	One gap junction consists of a cluster of closely packed pairs of transmembrane channels, the connexons, through which materials of low MW diffuse from one cell to a neighboring cell. [UniProt]
Calculated Mw	40 kDa
Cellular Localization	Cell junction, Cell membrane, Multi-pass membrane protein, gap junction. [UniProt]
