Bioinformation

Gene Symbol	LGALS4
Gene Full Name	lectin, galactoside-binding, soluble, 4
Background	The galectins are a family of beta-galactoside-binding proteins implicated in modulating cell-cell and cell-matrix interactions. The expression of this gene is restricted to small intestine, colon, and rectum, and it is underexpressed in colorectal cancer. [provided by RefSeq, Jul 2008]
Function	Galectin that binds lactose and a related range of sugars. May be involved in the assembly of adherens junctions. [UniProt]
