ARG62626 anti-NCOA1 / SRC1 antibody [SRC01 (GT12)]

Package: 100 μl Store at: -20°C

Summary

Product Description Mouse Monoclonal antibody [SRC01 (GT12)] recognizes NCOA1 / SRC1

Tested Reactivity Hu, Ms

Tested Application ICC/IF, IHC-P, WB

Host Mouse

Clonality Monoclonal
Clone SRC01 (GT12)

Isotype IgG1

Target Name NCOA1 / SRC1

Immunogen Raised against amino acids 477-947 of SRC-1 fusion protein

Conjugation Un-conjugated

Alternate Names EC 2.3.1.48; Renal carcinoma antigen NY-REN-52; Steroid receptor coactivator 1; bHLHe42; Class E basic

helix-loop-helix protein 74; Nuclear receptor coactivator 1; bHLHe74; F-SRC-1; SRC1; SRC-1; NCoA-1;

KAT13A; Protein Hin-2; RIP160

Application Instructions

Application Note

* The dilutions indicate recommended starting dilutions and the optimal dilutions or concentrations should be determined by the scientist.

Properties

Form Liquid

Purification Protein A purified

Buffer PBS (pH 7.4), 0.2% BSA and 0.1% Sodium azide

Preservative 0.1% Sodium azide

Stabilizer 0.2% BSA

Concentration 0.2 mg/ml

Storage instruction For continuous use, store undiluted antibody at 2-8°C for up to a week. For long-term storage, aliquot

and store at -20°C or below. Storage in frost free freezers is not recommended. Avoid repeated

freeze/thaw cycles. Suggest spin the vial prior to opening. The antibody solution should be gently mixed

before use.

Note For laboratory research only, not for drug, diagnostic or other use.

Gene Symbol NCOA1

Gene Full Name nuclear receptor coactivator 1

Background The protein encoded by this gene acts as a transcriptional coactivator for steroid and nuclear hormone

receptors. It is a member of the p160/steroid receptor coactivator (SRC) family and like other family members has histone acetyltransferase activity and contains a nuclear localization signal, as well as bHLH and PAS domains. The product of this gene binds nuclear receptors directly and stimulates the transcriptional activities in a hormone-dependent fashion. Alternatively spliced transcript variants

encoding different isoforms have been identified. [provided by RefSeq, Jul 2008]

Function Nuclear receptor coactivator that directly binds nuclear receptors and stimulates the transcriptional

activities in a hormone-dependent fashion. Involved in the coactivation of different nuclear receptors, such as for steroids (PGR, GR and ER), retinoids (RXRs), thyroid hormone (TRs) and prostanoids (PPARs). Also involved in coactivation mediated by STAT3, STAT5A, STAT5B and STAT6 transcription factors. Displays histone acetyltransferase activity toward H3 and H4; the relevance of such activity remains however unclear. Plays a central role in creating multisubunit coactivator complexes that act via remodeling of chromatin, and possibly acts by participating in both chromatin remodeling and recruitment of general transcription factors. Required with NCOA2 to control energy balance between white and brown adipose tissues. Required for mediating steroid hormone response. Isoform 2 has a higher thyroid hormone-dependent transactivation activity than isoform 1 and isoform 3. [UniProt]

Research Area Cancer antibody; Gene Regulation antibody; Metabolism antibody; Signaling Transduction antibody

Calculated Mw 157 kDa

PTM Sumoylated; sumoylation increases its interaction with PGR and prolongs its retention in the nucleus. It

does not prevent its ubiquitination and does not exert a clear effect on the stability of the protein.

Ubiquitinated; leading to proteasome-mediated degradation. Ubiquitination and sumoylation take

place at different sites.

Cellular Localization Nucleus
