

## Product datasheet

info@arigobio.com

# ARG62768 anti-CD20 antibody [LT20]

Package: 100 μg Store at: -20°C

### **Summary**

Product Description Mouse Monoclonal antibody [LT20] recognizes CD20

Tested Reactivity Hu
Tested Application FACS

Specificity The clone LT20 reacts with CD20 (Bp35), a 33-37 kDa non-glycosylated membrane receptor with four

transmembrane domains, expressed on B lymphocytes (it is lost on plasma cells), follicular dendritic

cells, and at low levels on peripheral blood T lymphocytes.

Host Mouse

Clonality Monoclonal

Clone LT20

Isotype IgG2a

Target Name CD20

Species Human

Immunogen Normal human lymphocytes from lymph node.

Conjugation Un-conjugated

Alternate Names Bp35; LEU-16; B-lymphocyte surface antigen B1; B-lymphocyte antigen CD20; CD20; S7; CD antigen

CD20; Leukocyte surface antigen Leu-16; B1; CVID5; Membrane-spanning 4-domains subfamily A

member 1; MS4A2

#### **Application Instructions**

Application table	Application	Dilution
	FACS	3 μg/ml
Application Note	* The dilutions indicate recommended starting dilutions and the optimal dilutions or concentrations should be determined by the scientist.	

#### **Properties**

Form Liquid

Purification Purified from ascites by precipitation methods and ion exchange chromatography.

Purity > 95% (by SDS-PAGE)

Buffer PBS (pH 7.4) and 15 mM Sodium azide

Preservative 15 mM Sodium azide

Concentration 1 mg/ml

Storage instruction For continuous use, store undiluted antibody at 2-8°C for up to a week. For long-term storage, aliquot

and store at -20°C or below. Storage in frost free freezers is not recommended. Avoid repeated

www.arigobio.com argo.nuts about antibodies 1/3

freeze/thaw cycles. Suggest spin the vial prior to opening. The antibody solution should be gently mixed

before use.

Note For laboratory research only, not for drug, diagnostic or other use.

#### Bioinformation

Database links GeneID: 931 Human

Swiss-port # P11836 Human

Gene Symbol MS4A1

Gene Full Name membrane-spanning 4-domains, subfamily A, member 1

Background CD20 is a member of the membrane-spanning 4A gene family. Members of this nascent protein family

are characterized by common structural features and similar intron/exon splice boundaries and display unique expression patterns among hematopoietic cells and nonlymphoid tissues. This gene encodes a Blymphocyte surface molecule which plays a role in the development and differentiation of B-cells into plasma cells. This family member is localized to 11q12, among a cluster of family members. Alternative splicing of this gene results in two transcript variants which encode the same protein. [provided by

RefSeq, Jul 2008]

Function CD20 is a B-lymphocyte-specific membrane protein. It plays a role in the regulation of cellular calcium

influx necessary for the development, differentiation, and activation of B-lymphocytes

(PubMed:3925015, PubMed:7684739, PubMed:12920111). Functions as a store-operated calcium (SOC) channel component promoting calcium influx after activation by the B-cell receptor/BCR

(PubMed:7684739, PubMed:12920111, PubMed:18474602). [UniProt]
