Background

PITPNM1 belongs to a family of membrane-associated phosphatidylinositol transfer domain-containing proteins that share homology with the Drosophila retinal degeneration B (rdgB) protein (Ocana et al., 2005 [PubMed 15627748]).[supplied by OMIM, Mar 2008]

Research Area

Cell Biology and Cellular Response antibody; Neuroscience antibody; Signaling Transduction antibody

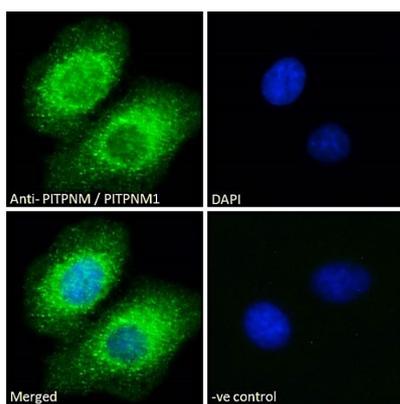

Calculated Mw

135 kDa

PTM

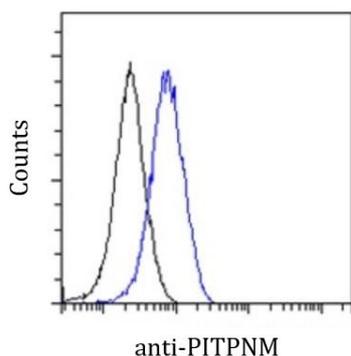

Phosphorylated on multiple sites by CDK1 at the onset of mitosis. Phosphorylation facilitates dissociation from the Golgi complex and is required for interaction with PLK1. Phosphorylated on threonine residues upon treatment with oleic acid. Phosphorylated on tyrosine residues by PTK2B.
