Bioinformation

Gene Symbol	RUFY1
Gene Full Name	RUN and FYVE domain containing 1
Background	This gene encodes a protein that contains a RUN domain and a FYVE-type zinc finger domain. The encoded protein binds to phosphatidylinositol-3-phosphate (PI3P) and plays a role in early endosomal trafficking, tethering and fusion through interactions with small GTPases including Rab4, Rab5 and Rab14. Alternatively spliced transcript variants encoding multiple isoforms have been observed for this gene. [provided by RefSeq, Dec 2011]
Function	Binds phospholipid vesicles containing phosphatidylinositol 3-phosphate and participates in early endosomal trafficking. [UniProt]
Calculated Mw	80 kDa
PTM	Phosphorylation on Tyr-389 and/or Tyr-400 is required for interaction with BMX and endosomal targeting. [UniProt]
Cellular Localization	Cytoplasm. Early endosome membrane; Peripheral membrane protein. [UniProt]
