## Bioinformation

Gene Symbol	SLAMF1
Gene Full Name	signaling lymphocytic activation molecule family member 1
Function	High-affinity self-ligand important in bidirectional T-cell to B-cell stimulation. SLAM-induced signal-transduction events in T-lymphocytes are different from those in B-cells. Two modes of SLAM signaling are likely to exist: one in which the inhibitor SH2D1A acts as a negative regulator and another in which protein-tyrosine phosphatase 2C (PTPN11)-dependent signal transduction operates. PTM	Phosphorylated on tyrosine residues by FYN. [UniProt]
