Bioinformation

Gene Symbol	TREML1
Gene Full Name	triggering receptor expressed on myeloid cells-like 1
Background	This gene encodes a member of the triggering receptor expressed on myeloid cells-like (TREM) family. The encoded protein is a type 1 single Ig domain orphan receptor localized to the alpha-granule membranes of platelets. The encoded protein is involved in platelet aggregation, inflammation, and cellular activation and has been linked to Gray platelet syndrome. Alternative splicing results in multiple transcript variants [provided by RefSeq, Nov 2012]
Function	Cell surface receptor that may play a role in the innate and adaptive immune response. [UniProt]
