### Bioinformation

Gene Symbol	PTH
Gene Full Name	parathyroid hormone

Background	The protein encoded by this gene is a hormone secreted by parathyroid cells. This hormone elevates blood Ca <sup>2+</sup> level by dissolving the salts in bone and preventing their renal excretion. Defects in this gene are a cause of familial isolated hypoparathyroidism (FIH). [provided by RefSeq, Jul 2008]
Function	PTH elevates calcium level by dissolving the salts in bone and preventing their renal excretion. Stimulates [1- <sup>14</sup> C]-2-deoxy-D-glucose (2DG) transport and glycogen synthesis in osteoblastic cells. [UniProt]
