

ARG83096 Human Residual RNA Detection Kit

Package: 100 tests
Store at: -20°C

Summary

Product Description	Human Residual RNA Detection Kit is designed for the quantitative detection of residual Human total RNA in various biological products to improve control quality of nucleic acid. This kit adopts the principle of the RT-PCR fluorescent probe, combining reverse transcription PCR technology and fluorescent probe method, to realize one-step quantitative detection.
Tested Reactivity	Hu
Tested Application	FuncSt
Target Name	Human Residual RNA
Sensitivity	5×10^{-4} pg/ μ L
Standard Range	$2 \times 10^{-3} \sim 2 \times 10^1$ pg/ μ L

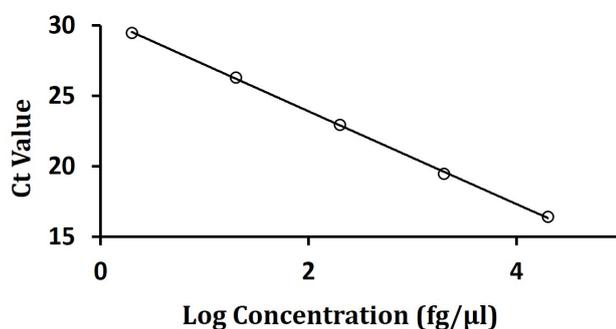

Properties

Storage instruction	Store the kit at -20°C at all times. All reagents must be kept on ice during the entire experiment.
Note	For laboratory research only, not for drug, diagnostic or other use.
