ARG83326 Human MDGA1 ELISA Kit

Package: 96 wells Store at: 4°C

Summary

Product Description ARG83326 Human MDGA1 ELISA Kit is an Enzyme Immunoassay kit for the quantification of Human

MDGA1 in Serum, Plasma and Cell culture supernatants.

Tested Reactivity Hu

Tested Application ELISA

Specificity There is no detectable cross-reactivity with other relevant proteins.

Target Name MDGA1

Conjugation HRP

Conjugation Note Substrate: TMB and read at 450 nm.

Sensitivity 31.5 pg/ml

Detection Range 62.5 pg/ml - 4,000 pg/ml

Sample Type Serum, Plasma and Cell culture supernatants

Precision Intra-Assay CV: 4.5%

Inter-Assay CV: 4.8%

Alternate Names MDGA1; MAM Domain Containing Glycosylphosphatidylinositol Anchor 1; MAMDC3; GPIM; MAM

Domain-Containing Glycosylphosphatidylinositol Anchor Protein 1; Glycosylphosphatidylinositol-MAM;

MAM Domain-Containing Protein 3; GPI And MAM Protein

Application Instructions

Assay Time ~ 5 hours

Properties

Form 96 well

Storage instruction Store the kit at 2-8°C. Keep microplate wells sealed in a dry bag with desiccants. Do not expose test

reagents to heat, sun or strong light during storage and usage. Please refer to the product user manual

for detail temperatures of the components.

Note For laboratory research only, not for drug, diagnostic or other use.

Bioinformation

Gene Symbol MDGA1

Gene Full Name MAM Domain Containing Glycosylphosphatidylinositol Anchor 1

Background This gene encodes a glycosylphosphatidylinositol (GPI)-anchored cell surface glycoprotein that is

expressed predominantly in the developing nervous system. In addition to possessing several cell adhesion molecule-like domains, the mature protein has six Ig-like domains, a single fibronectin type III domain, a MAM domain and a C-terminal GPI-anchoring site. Studies in other mammals suggest this protein plays a role in cell adhesion, migration, and axon guidance and, in the developing brain,

www.arigobio.com arigo.nuts about antibodies 1/2

neuronal migration. In humans, this gene is associated with bipolar disorder and schizophrenia.

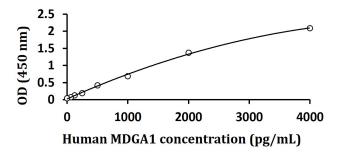

Function Plays a role in the formation or maintenance of inhibitory synapses. May function by inhibiting the

activity of NLGN2.

PTM Disulfide bond, Glycoprotein, GPI-anchor, Lipoprotein

Cellular Localization Cell membrane, Membrane

Images

ARG83326 Human MDGA1 ELISA Kit standard curve image

ARG83326 Human MDGA1 ELISA Kit results of a typical standard run with optical density reading at $450\,\mathrm{nm}$.
